## ENERGY MONITOR 3000 FOR AUSTRALIA

The Energy Monitor 3000 is an easy to use mains (240V a.c.) energy measuring instrument for both the professional and home owner. This instrument gives accurate (<1%) instantaneous readings of mains volts, current (up to 13A), frequency, power, VA, power factor (will indicate capacitive or inductive), as well as recording maximum and minimum values. The Energy Monitor 3000 will record operating time of the appliance in hours and % of total time (off <2.4VA). The Energy Monitor 3000 is equipped with a backup battery to remember accumulated energy totals if the mains fails, or inverter switchers to standby mode or the unit is sent to a remote location. This instrument is an invaluable tool for Energy Auditing, Stand-alone Power System owners and installers.
